**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bhat (U.S. Pub. No. 2005/0018088) in view of Munsey (U.S. Patent No. 4,057,836).

Regarding claim 7, Bhat a method for broadcasting (1) audio (3) and video (2) simultaneously from the same broadcast station (see fig. 1A-B, page 1, par. [0001-0005]). Whereby using any ordinary broadcast receiver (100) plus any stand alone TV Converter (110) (see fig. 2, page 2, par [0020-0021]). Providing audio in stereo or not and video (see fig. 1A-B and 2, page 2, par [0020-0021]). The method will enable radio stations to broadcast audio and video at the same time over the air within the bandwidth that is allowed by the agency that regulates broadcast communication (see fig. 1A-B and 2, page 1-2, par. [0001-0005 and 0017-0021]. And page 4, par [0049-0054]). In this case, radio station is broadcast audio (BWA) and video (BWV) at the same time over the air with broadcast (1) BWC (see fig. 1A-B, page 1, par [0002], line 10, and [0017-0019]). However, Bhat teaches the TV receiver (100 and the turner (110) for Scan converter. But Bhat does not mention the turner (110) is a slow scan TV converter.

However, Munsey the Standard slow scan TV is a slow scan TV converter (15) (see fig. 1A, col. 2, lines 38-42 and col. 3, lines 28-41).

Therefore, it would have been obvious to one of ordinary skill in the art at the time invention was made to modify above teaching of Bhat with Munsey, in order to developed to accommodate high data rate sources to narrow band communication channel, and slow scan have had particular application to the transmission of video information over voice grade communication channels at a data rate that can be accommodate in limited bandwidth available (see suggested by Munsey on col. 1, lines 17-24).

### *Conclusion*

3. Applicant's amendment necessitated the new ground(s) with new claim of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
